

Evaluate your lighting.

Lighting is the most efficient and cost effective security feature available to deter crime and reduce the fear of crime. Many inadequate security lawsuits involving parking lots cite insufficient lighting as a major factor.

NEW SECURITY LIGHTING GUIDELINES FOR ILLUMINATION LEVELS HAVE BEEN ESTABLISHED.

In 2003, the Illuminating Engineering Society of North America (IESNA) issued these security specific lighting guidelines. JD Security Consultants, LLC will conduct a security lighting survey to assist you in complying with these updated requirements.

Have you considered?

- When did you last check your property illumination? Are you protected?
- What kind of device you should use to measure your lighting levels?
- Do you know the minimum number of readings you should do per location?
- Do the average lux/fc readings meet the IESNA guidelines for your location?
- What your illumination measurement is when foliage is in full bloom?
- What landscaping conditions affect the level of illumination?
- Getting a written report outlining recommendations?

Let us educate you about the security, insurance and legal risks. Call JD Security Consultants, LLC at 610.269.8086 to learn the details you need to know to fully protect yourself and your organization.
